Sheet N° 12- 1/2 - Green ammonia / NH3 production unit

Description

Transformation of green hydrogen by the Haber-Bosch process into the easily transportable NH3 molecule for export and fertiliser production. Unit with average capacity of **200 MW**. Project including green electricity and hydrogen production

Main customers: fertilizer industry, shipping

Sector and sub-sector: Green hydrogen and its derivatives /

Complexity -3,33 2,56 of the product¹ -1,33

HS Code: 2814

Key facts

- Ammonia accounting for 36% of global H2 consumption with many projects under development for green substitutes (eq. Nutrien and CF Industries)
- World market dominated by exports from Trinidad and Tobago, Russia and Saudi Arabia
- ➤ Significant export potential, driven by carbon taxes in Europe and the United States to encourage the consumption of green fertilisers (one of the six sectors covered by the carbon tax)
- > Potential for substitution of imported NH3 by green NH3 production in Morocco

Prerequisites (2)

> Securing premium purchase contracts upstream of the project

Market indicators

Target market(s):

Target market(s), (from highest to lowest priority) to be addressed:

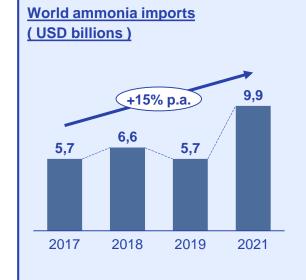

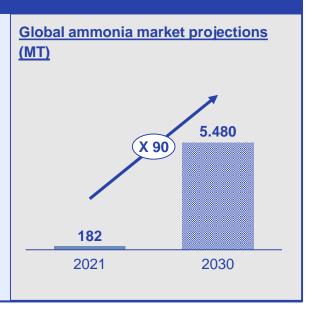

<u>Exports</u>: Mainly to the US and Europe (in connection with decarbonisation regulations)

National: As a substitute for fossil-based ammonia imports from Russia, Trinidad and Tobago and Algeria

Market size and development (3)

⁽¹⁾ Product Complexity Index: Diversity and sophistication of the know-how required to produce a product. The PCI is calculated according to the number of countries that produce the product and the economic complexity of these countries. The most complex products, those that only a few countries can produce, have the highest PCI (e.g. electronics, chemicals) vs. the least complex products (e.g. raw materials, agricultural products) - Source: TradeMap, Harvard economic complexity

Human resources

HR skills needed

 Renewable energies, industrial chemistry, water desalination, air distillation, electrolysis and gas purification

Training offers

- Multidisciplinary Faculty (Ouarzazate): Control and exploitation of renewable energies
- EST (Laâyoune branch): Professional degree in renewable energies and water desalination

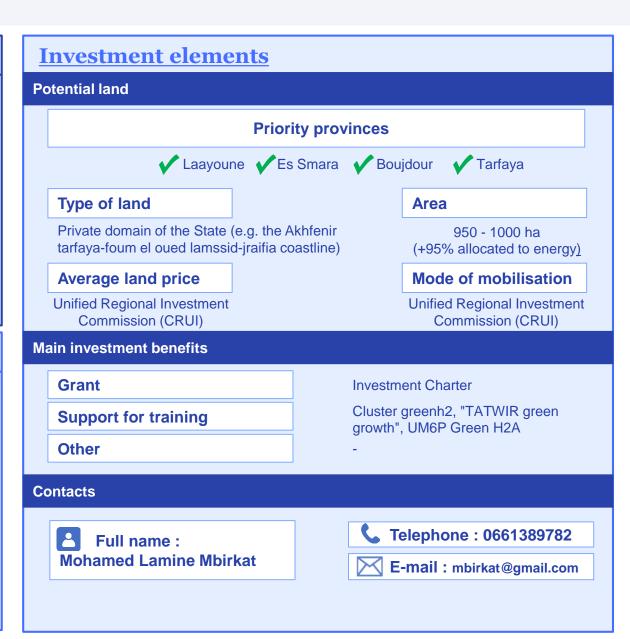

Raw materials and suppliers

Main inputs

- Nitrogen (integrated production in the Haber-Bosch process)
- Water, electrolytes

Main suppliers

- Morocco: Nitrogen
- China: electrolytes, renewable energy sources (photovoltaic panels, wind turbines, etc.)
